

Quick guide to locating a Meta Alarm Brain in your vehicle

M02, M03 & M04 sirens
Usually fitted to HPA alarms

M02 Siren

M03 Siren

M04 Battery Backed Up Siren

M07 Siren - Early model
Used by M96 & similar
Modular Alarms

SC1T2 Battery Backed Up Siren

Note the thin cable
which denotes this
to be just a siren

Usually fitted to the M99T2

Compact Range
(M85, M870, M8027 etc)

Note the thick cable
which denotes this
to be a compact alarm

The siren & alarm brain all
contained within the siren unit

If you are unsure of what model alarm is fitted to your vehicle it will have to be located. All Meta alarms begin with the letter 'M' followed by a number I.E. M99T or M8700 etc. Firstly look under the bonnet for the siren, once located inspect the cable coming from it, if the cable is very thin (only a few wires encased in a rubber/plastic sheath) this is just a siren and the actual alarm control brain will be hidden somewhere under the dash (known as a modular alarm).

If the siren has a sticker (usually found on the underside of the siren - unbolt for easier access) if the model numbers are M07, M11 or SC1T2 these are sirens and the alarm control box will be hidden somewhere under the dash. If the siren is the SC1T2 the alarm fitted will more than likely be the M99T2. If the M07 is fitted the alarm is probably the M96 or M96E.

If there are quite a few wires (or a thick cable sheath) coming from the siren this indicates it to be the actual alarm system (known as a compact alarm) on it should be a sticker with the model number, it may be necessary to unbolt the siren as the sticker is on the underside. In all cases the model number begins with the letter 'M', I.E. M870, M8700 or M2807 etc. Once found contact the office for more info.

If the vehicle is fitted with just a siren, the alarm brain will be found somewhere under the dash, the easiest way to find the unit is either follow one of the sensor wires (usually fitted either side of the windscreen pillars) or the LED wire or the siren wire which should all lead you to the unit. Again once found there should be a sticker with the model number and again in all cases begins with the letter 'M', I.E. M99 or M996 etc. The control box can vary in size roughly from a paperback book to a box a little larger than a packet of cigarettes, in all cases there will be a large number of wires, containing a dozen or more. Once found contact the office with this information.

Common Meta alarm control ECU's

M99T2

M99T

M996

M928

We can only re-code later Meta alarms such as the M870, M8700, M2087, M996, M928, M99T, M99T2, M187, M871 and HPA range with two fobs and a new code-card, in many cases we can offer an exchange item so it will be a simple case of plug and play for replacing it.

For more information about re-coding Meta alarms call the office on 0208 677 1999
